EXPERIENCE

Freelance AI Automation Engineer | Self-Employed

2026 – Present

Remote

- Developed AI agent workflows using **n8n** and Large Language Models (LLMs) to automate business processes.
- Built retrieval-augmented (RAG) and multi-step AI workflows by integrating vector databases and LLM APIs.
- Automated document processing, email classification, and lead qualification using event-driven workflows.
- Designed scalable API integrations and webhook-based architectures for real-time workflow orchestration.

Home Tutor

2025 – 2026

Jhang, Pakistan

- Taught Mathematics, Computer Science, and Sciences to students from Class 5 to Class 8.
- Helped students with homework, assignments, and exam preparation, improving their academic performance.

PROJECTS

AI Competitor Analysis System | Final Year Project

2025 – 2026

- Built an AI-driven platform that automates competitor intelligence by analyzing website content.
- Developed web scraping pipelines to collect and preprocess content from multiple sources.
- Leveraged LLMs to generate structured analyses of market positioning and competitive advantages.
- Architected a modular Python backend with reusable components for data collection and AI inference.
- Technologies:** Python, BeautifulSoup, Scrapy, Selenium, FastAPI, OpenAI/Gemini APIs, Pandas, Git.

AI-Powered Post-Purchase Automation Engine | n8n

2026

- Designed an AI-driven post-purchase platform to personalize customer engagement.
- Built event-driven n8n workflows integrating e-commerce platforms and LLM APIs.
- Engineered context-aware follow-up messages based on customer purchase history.
- Implemented webhook-based automation, API integrations, and workflow monitoring.

Fake Job Detection using Machine Learning

2025

- Developed a machine learning pipeline to detect fraudulent job postings using text classification.
- Performed data preprocessing, feature engineering, and text vectorization using TF-IDF.
- Trained and evaluated classification models including Random Forest and XGBoost.

EDUCATION

The Islamia University Of Bahawalpur

2022 – 2026

Bachelor of Artificial Intelligence

Bahawalpur

- Coursework:** Data Structures, Algorithms, Databases, Machine Learning, Deep Learning.
- Final Year Project:** AI-COMPETITOR ANALYSIS .

SKILLS

Languages : Python, Java, SQL, MySQL

Tools and Frameworks : Pandas, NumPy, TensorFlow, Seaborn, Matplotlib, Git, GitHub, Hugging Face, VS Code, Streamlit, n8n

CERTIFICATIONS

Python Programming – Boot.dev

Object-Oriented Programming (OOP) – Boot.dev

Generative AI Application Developer – UETIANS Lahore Endowment Foundation

Data Science – Skilled Score
